Take control of your call with one tap

How to block email address on android. How to block unwanted emails on android. How to block email address on android phone. How to block junk email on android.

Is your iPhone getting blown up with spammy messages? Then you should probably update to iOS 13 if you haven't already. iOS 13 includes a couple of new tools for blocking junk emails and robocalls, and carries over the iMessage blocking options from iOS 12. These make it easy to filter out unwanted messages at the source—whether from specific contacts or en masse. Even better, any numbers or email addresses you block from an iPhone will be blocked on your other Apple devices as well. Here's how:Blocking unwanted email First, you can block specific contacts from the iOS Mail app by opening a message and tapping the sender's email address. Tap "Block This Contact" button.Next, go to Settings > Mail and turn on "Ignore Blocked Senders." You can also go to Settings > Mail > Blocked to add to/manage your list of blocked contacts.Blocking unknown callersGo to Settings > phone and turn on "Silence Unknown Callers." This disables ringing and notifications for calls from unknown numbers which should cut down on spam and robocalls, but be aware this could also block important calls from numbers you don't have saved. It would be smart to turn this off if you're expecting an important phone call from a number you don't know or don't have saved.Blocking iMessage contactsWhile you've technically been able to block contacts in iMessage since iOS 12, the method for blocking is quite similar to blocking email addresses and phone numbers. Under Settings > Messages, turn on "Filter unknown senders." Just be mindful that this will prevent you from seeing messages from all unknown senders, much like when blocking unknown numbers, so be careful about when you have this setting enabled, and be sure to check your folder of filtered messages if you're expecting to hear from someone. Tap the Gmail icon to open the app. Go to the menu button and select Settings > Add account. In the Set up email screen, choose Google.In the Gmail sign-in screen, enter an existing Gmail address and select Next or select Create account and follow the prompts.Enter your credentials and information as prompted. In the Gmail Settings, the new account is listed below your previous account. This article explains how to configure multiple Gmail accounts on an Android. It includes information on why you might want to have multiple Gmail accounts. Instructions in this article apply to Android 2.2 and above and should work with any Android phone. Gmail is Google's free email service that does much more than send and receive email. If you have more than one Gmail account, you can configure an Android smartphone to use all of them. Adding one or more additional Gmail accounts to your Android phone is a straightforward process. Tap the Gmail icon on the phone's home screen or find it in the application list. In the upper-left corner of Gmail, tap the menu button to display additional options. Scroll to the bottom of the menu, then tap Settings. In the Settings page, tap Add account. In the Set up email page, choose Google. The phone takes a few seconds to load, and depending on its security, prompts you for a password. That's because you're adding a second Google account to the phone by adding this email address. When it's done, the Gmail sign-in screen appears. Either enter the existing Gmail address or select Create account at the bottom of the page. If you enter an existing Gmail address, press Next to continue. Follow the on-screen steps to enter your credentials and other necessary information. When you're done, the Gmail Settings appears. The new account is listed below your previous account. After you add the second account, both of the Gmail accounts are linked to your Android phone, and you can send and receive emails from either of the accounts as needed. There are many reasons to have more than one Gmail account. Having separate accounts is one way to separate personal email accounts from work email accounts to preserve a work-life balance. This way, you can go on vacation and ignore your work email account while staying in contact with friends and family. A separate Gmail account can be used for non-essential email, for example, to sign up for promotions or other marketing-related programs such as newsletters, sale alerts, promotional emails, and sweepstakes registrations. When you give your email address to these sources, they send lots of messages. If that promotion or sweepstakes sells your email address and information to another legitimate organization for marketing purposes, your inbox is going to fill with even more messages. Finally, less reputable sources of spam can obtain your email address, and the result is a lot of junk email. With a separate Gmail account, these messages are collected in one place, away from your important personal or work email inboxes. You can choose to ignore that account and avoid sifting through the junk to find important messages. Gmail also provides filtering help with email messages, so even in your marketing and promotional email account, spam and junk mail can be separated from those newsletter and sale promotions you are interested in. Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why! Knowing how to block a phone number on Android will certainly prove useful if you're constantly receiving spam and promotional text messages or calls from an unwanted person.As of right now, Android is the most-used operating system in the world — rivaling Apple's iOS — with over 2.5 billion active users spanning over 190 countries. So if you're among the many Android users trying to figure out a way to block a phone number on your smartphone, we've got you covered.Whether you're a novice Android user or one of those few lucky users who hasn't had to consider blocking/reporting a certain phone number until now, this is one of the most common practices for the majority of smartphone users. Simply put, by blocking a phone number, you restrict the person (or AI bot) behind it from contacting you at all. This means that no calls and text messages will go through to your phone from a blocked sender. However, you can still contact a blocked phone number through a phone call and the recipient should be able to answer your call. Below, we've prepared a step-by-step guide on how to block a phone number on Android through both the Phone app and your Contacts list. Keep in mind that at the time of writing, we were using a Samsung Galaxy A20e. It's also worth noting that some screenshot elements were blurred/covered for privacy purposes.1. First, locate and tap on the Phone app icon in the main menu.(Image credit: Samsung)2. Next, tap on the three-dot icon, which should appear on the right-hand side of the screen.(Image credit: Samsung)3. Go ahead and tap the Settings option in the drop-down menu as shown below.(Image credit: Samsung)4.

Next, select the "Block numbers" option. And if you're trying to protect yourself from spam, make sure to check our guide on report spam text messages for more guidance.(Image credit: Samsung)5. At this stage, you can turn on a feature that blocks any unknown or private numbers by toggling the grey icon. To block a new number you can either: type in the number manually, select one from the "Recent" calls/text messages, or from your Contacts list. If you're doing the former, make sure to tap "Done" and "+" to finalize the process.(Image credit: Samsung)Congratulations! You're all done. You can remove a blocked number at any time by tapping the "-" icon right next to it.(Image credit: Samsung)1. First, locate and tap on the Contacts app from the main menu.(Image credit: Samsung)2. Next, select a person that you'd like to block from your Contacts list.(Image credit: Samsung)3. Go ahead and tap on the three-dot icon, which should appear on the bottom right part of your screen.(Image credit: Samsung)4. Next, tap the "Block Contact" option in the drop-down menu.(Image credit: Samsung)5. Almost there! Confirm your choice by tapping "Block" in the pop-up window. Got it? Alright, you're all done. You can remove a number from your blocked list at any time by tapping the three-dot icon and selecting "Unblock contact."(Image credit: Samsung)More: Best Android VPN available right nowToday's best Samsung Galaxy S21 deals (opens in new tab) (opens in new tab)View Deal (opens in new tab) (opens in new tab) (opens in new tab) (opens in new tab)View Deal (opens in new tab) Spam and telemarketing calls are super annoying. But you can block them from your phone. Flashpop/Getty Images Getting unwanted phone calls can totally disrupt your day. And answering repeated calls from telemarketers or robocallers is a waste of time. While you can certainly stop answering the phone, or download call-blocking apps such as Nomorobo, there's another way to handle the problem. One way you can cut down on these unwanted calls is to block the offending phone numbers from calling you again. Most phones include a call-blocking feature. How you block a number depends on the type of phone you have. To help you figure out how to block a number with your phone, we've broken it down by the most common phone systems in use today. Blocking a number on an iPhone is fairly straightforward. And you can block incoming voice calls, or via FaceTime or the Messages app. Here's how: After a call comes in, tap the "i" icon next to the phone number (or contact) you wish to block. Scroll all the way down and select "Block this Caller" to complete the process. If you prefer to just avoid unwanted calls outright, you can also silence calls from unknown callers. To do this, go to "Settings" and select "Phone" and turn on "Silence Unknown Callers." This option will send calls from phone numbers that aren't in your contacts directly to voicemail. Considering how Android is open to customization, blocking a number can vary depending on the device and manufacturer. In general, devices running the most current version of Android can block numbers by selecting a phone number from a contact's page. When selecting a phone number, hold down on the selection to bring up a drop-down menu. From here, select "Block/report spam" to block the number. From a contact's page, just click on the ellipsis icon at the top of the page. Then, select "Block Number" from the drop-down menu. Since landlines don't have all the features of smartphones, the process for blocking phone numbers is dependent on third parties. That means you can either go through your phone provider or buy a call-blocking device. However, provider offers can vary greatly. Some providers may have services for blocking calls, while others may send suspicious calls directly to voicemail. Your best bet is to discuss the options with your phone company to find out what they offer. If you'd prefer not to go through your phone provider, installing a call-blocking device might be worth considering. These small devices use a directory of scam numbers to determine calls to block. If spam calls do get through, you can add the offending numbers to the directory. In addition to adding numbers, these devices allow you to create lists of approved numbers and set up "do not disturb" hours, where all calls go to voicemail. Of course, adding and blocking every single spam call can be tedious. If you want to avoid that altogether, why not just let the people making those unwanted calls know they can't? That's where the Federal Trade Commission (FTC)'s National Do Not Call Registry has you covered. According to the FTC, the Do Not Call Registry is "a list that tells telemarketers what numbers not to call." Registering your number is free and all you need to do is visit the website or call 888-382-1222 to sign up. Although it only takes 24 hours for your number to be added, it can take up to 31 days for the unwanted calls to stop. Your number will stay on the Registry as long as it's active or until you request it be removed. Since the FTC has no power to block your number, you may receive calls from those who ignore the list. If you still get spam calls and you're on the Do Not Call Registry, you can file a complaint with the FTC.
